4 steps to take if someone is having a cardiac arrest.

Cardiac arrests can happen to anyone, at any time. The following steps give someone the best chance of survival.

If you come across someone in cardiac arrest:

1. Always Call 999

2. Start CPR

### **Cardiopulmonary resuscitation**

Cardiopulmonary resuscitation is an emergency procedure that combines chest compressions often with artificial ventilation in an effort to manually preserve intact brain function until further measures are taken to restore spontaneous blood circulation and breathing in a person who is in cardiac arrest.

3. Ask someone to bring a defibrillator if there's one nearby.

4. Turn on the defibrillator and follow its instructions.
